

Association between municipality characteristics and weekly COVID-19 positive cases

Positive count model incidence rate ratio with 90% and 95% CI (logged scale)

Models estimated daily by hurdle model with logit for hurdle component and negative binomial regression for positive count.
 Predictors' scales are standardized: odds/incidence-rate ratios correspond to 1 SD increase in each predictor.
 Includes cases recorded by 2020/05/17 (N=893 in each model).
