Association between municipality characteristics and COVID−19 positive cases on 2020−05−14

Incidence−rate ratio (logged scale)
with 95% and 90% confidence intervals

Statistical Significance ● p<.05 ▲ p<.10 ■ n.s.
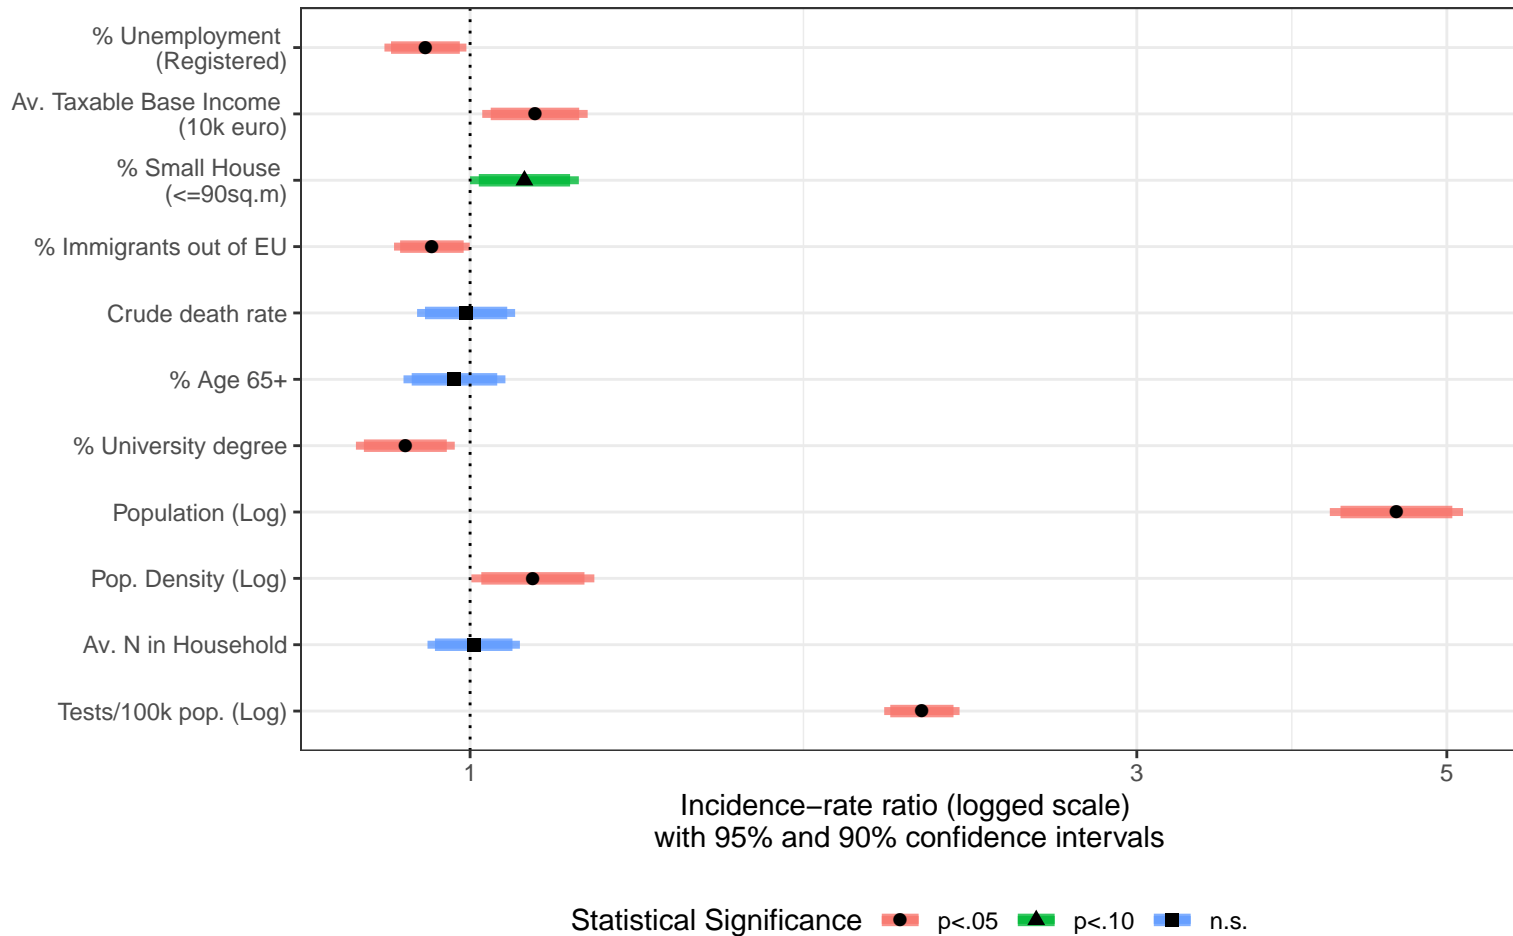

Predictors' scales are standardized: coefficients correspond to 1 SD increase in each predictor.
Dependent variable is COIVD−19 positive case at 2020−05−14. Model estimated by negative binomial regression.
Municipalities with less than 1 tests or 0 positive cases are dropped. N = 807.
